74. Global requiredness rules	757
75. Other global rules	758
76. List of tables	840

1. Introduction

1.1. Purpose of the document

The purpose of the specification is to define the structure and content of XML documents (called here 'messages'), sent and received by the System.

The document contains a description of the messages which are electronic customs declaration procedures and import the messages used in the service of customs declarations, inter alia: requests for rectification, revocation or cancellation of customs declarations, electronic messages informing of acceptance of the customs declaration and clearance for the procedure.

The document contains also a description of the messages which are declarations for temporary storage, electronic communications constitute a request for rectification, cancellation or change of date for the temporary storage and messages about the adoption of the declaration of temporary storage and acquisition of temporary storage of goods.

The above-mentioned electronic messages are listed between the customs office and business entities or individuals comprising the customs declaration or declarations for temporary storage.

1.2. Application

The document is used for designing, implementing and creating test and functional documentation of the System.

1.3. The contents of the document

The document consists of the following components:

- Chapter „Introduction” - provides an introduction to the document;
- Sections that define XML documents - „X message”, where X is the name of the message;
- Two chapters describing the requiredness rules and other rules which are used by all defined messages.

Specification is delivered as "zip" file with schemas files in xsd format.

1.4. Prepare specifications for the Union Customs Code (UCC)

The provisions of the EU Customs Code and regulations delegated and implementing regulations issued on its basis are provide for changes in the data provided in the Electronic Import Declaration and Summary Entry Declaration, but because of the provided by the EC transition periods for various issues influencing the data given in the Import Declarations, changes resulting from the these laws are not implemented at the moment.

This specification has been developed to minimize the impact of these changes, and additionally is already partly prepared for the changes.

Therefore, in the specification of the attributes and elements annotations are provided:

Element will be used in the development of AIS in connection with the work of the Implementing and Delegated Regulation to the EU Customs Code (UCC)' or 'attribute will be used in the development of AIS in connection with the work of the Implementing and Delegated Regulation to the EU Customs Code (UCC)'.

Annotations mean that these data should not be used in messages sent to the customs office until this requirement will result from the regulation of the UCC. At the same time the principle of administration in the applications or declarations of some of these data are not fully explained. These doubts concern:

- multiplicity of elements or attributes - PosiadaczPozwolenia, Procedura/Szczegoly, PlatnoscOdroczone, PodmiotWLancuchuDostaw,
- occurrence data header (the root element), or element Towar - relates to a DoliczeniaOdliczenia
- data format - relates to Stawka attribute
- occurrence data - relates to Kontrakt attribute, the data to calculate the debt for postal applications

We can't also exclude other small changes.

In addition, the specification may appear annotations:

Element will be used in the development of AIS' or 'Attribute will be used in the development of AIS'

These annotations mean that these data should not be used in messages sent to the customs office until their use in the instructions.

1.5. Required knowledge

List of issues that the reader should know in order to effectively known this document:

- Knowledge of XML standards (including XSD).

1.6. Source and support documents

Designation	Description
D1	[deleted]
D2	[deleted]
D3	Specification of business processes and system requirements for AIS System. 1.01.
D4	System documentation and requirements - Appendix No. 4 to the Agreement of 15 April 2013.
D5	Features and Requirements - Appendix No. 1 to the Agreement of 15 April 2013.
D6	Commission Regulation (EWG) RWKC No 2454/93 of 2 July 1993
D7	Appendix 4 'SUMMARY DECLARATION FOR TEMPORARY STORAGE' Regulation of the Minister of Finance dated 22 July 2011 on the model forms used in customs matters (Journal of Laws No. 166, item. 995 as amended).
D8	Delegated regulation to Union Customs Code (EU) 2015/2446

Table 1 Documents and support.

1.7. Abbreviations and terms

1.7.1. Abbreviations used in the document

Abbreviation	Description
DG TAXUD	Taxation and Customs Union Directorate General
DSK	Temporary storage declaration
EORI	Unique in the EU registration and identification number assigned to the operators by the customs authority of a Member State or by another designated authority for customs purposes.
MRN	Movement Reference Number
MRZ	Notification of the arrival Number
PDR	Reference Data Subsystem
W3C	World Wide Web Consortium (W3C In short) is an industry consortium which seeks to promote standards for the evolution of the Web and interoperability between WWW products by producing specifications and reference software
XML	Extensible Markup Language, a specification developed by the W3C. XML is a pared-down version of SGML, designed especially for Web documents. It allows designers to create their own customized tags, enabling the definition, transmission, validation, and interpretation of data between applications and between organizations.
ZCP	Import declaration

Table 2. Abbreviations used in the document.

1.7.2. Terms used in the document

Term	Description
Message	XML Document that is sent or received by the System.
System	If not specified otherwise, it means AIS/IMPORT System.
XML schema	Published as a W3C specification, that defines structure of XML document.

Table 3. Terms used in the document.

1.8. Representation of Functional Message Structure

This appendix describes the detailed structure of each Functional Message Structure (FMS) for messages

- Structure example:

a	b	c
MainElement	1	-
– ElementChild	1	-
– – ElementChild1	0..1	RW11
– – ElementChild2	0..1	RW12

where:

- a Column that defines structure of an XML document – a tree of elements. The number of „–” characters reflects the nesting level of the element in the tree.
- b Column that defines number of repetitions of a given element . Possible values are „n” and „n..k”, where n, k are integers. Value n means that the element must be repeated n times. Value „n..k” means that there must be at least n elements and maximum k elements. Typical examples are: „1” when there is only one element, „0..1” when the element may occur, but only once, „1..9” when the element must occur at least once and maximum 9 times, „0..9” when the element may occur, but maximum 9 times.
- c This column specifies identification numbers of the rules that apply to a given element (see chapter „Rules”). If there are no rules related to a given element, the column is filled with „-” character.

- Contents example:

/MainElement/ElementChild/ElementChild1

A child element grouping data on this item.

Attribute1

Description of attribute 1.

0..99 [RW19](#)

- z2 007 W -

where:

- a** Name of an element and path with parent elements. Defined element is highlighted with bold font.
- b** Comments.
- c** Information on how many times an element may be repeated. This information is also included in „Structure” chapter.
- d** Identification numbers of the rules that apply to a given element (see chapter „Rules”). If there are no rules related to the element, the column is filled with „-“ character. Rules are also defined in „Structure” chapter.

Specification of the attributes is defined in the following columns:

- e** Name of an attribute (bold font) and comments concerning this attribute.
- f** Number of the SAD box of a given document or „-“ when the attribute does not appear on paper (also when there is no paper form for the document).
- g** Attribute type (see „Data types” section).
- h** Code of a codelist that defines possible values of the attribute. If there is no codelist for the attribute, the column is filled with „-“. The codelist is available at: <https://puesc.gov.pl/web/puesc/do-pobrania>
- i** Requiredness of the attribute: „W” – required, „O” – optional, „Z” – conditional –occurrence of the attribute depends on the rules (see chapter „Rules”).
- j** Identification numbers of the rules that apply to a given element (see chapter „Rules”).

- Local requiredness rules
Contains a set of local rules that define requiredness of the elements and attributes (see chapter „Rules”).
- Other local rules
Contains a set of other local rules (see „Rules” section).
- Schema
Refers to a schema file compliant with the XML Schema standard.

Rules applying to more than one XML document are described in the following chapters:

- Global requiredness rules
Contains a set of global requiredness rules.
- Other global rules
Contains a set of other global rules.

1.9. Rules

In this specification the rule means a validation algorithm of elements and / or attributes able to be executed by software.

Each rule has the Identification number. ID starts with the characters „R”, „RW”, „G”, „GW” that define the type of rule, followed by a number representing the number of the rule.

The rules may apply to:

- any document defined by this specification - global rules which identifier starts with „G” and is unique within specification;
- one document - the local rules, which ID starts with „R” and is unique within a chapter defining a document.

From the algorithms' point of view rules were divided into two groups:

- requiredness rules, which define whether an element or attribute is required or optional – second character of the identification is „W. These rules are used when it is not possible to define if an element is required or not – the specification assigns „Z” to such attributes/ elements and defines requiredness rule;
- other rules.

Examples:

G W 1	12th global requiredness rule
Ø12	12th other global rule
RW12	12th local requiredness rule
R12	12th other local rule

Some of the rules have an additional „S” index e.g. G6S. This means that the rule is checked by schema file.

If the rule is created on the basis of [D1] document, then there is a reference to the original

rules after a definition, eg. FTSS="R868*". If there is given an asterisk indicated the ID rule, it means that there has been made a change to this rule in this specification (the rule is not transferred directly).

1.10. Data types

- Character type is described by „zn” or „z..n”, where z in an alphanumeric character and n is an integer. Defines a string of a certain length - „z..n” (allowed characters are defined in the chapter „Allowed character set”). Character type in this specification is also defined for the strings of digits which are not treated as numbers, e.g. transportation codes’ type is character.

Examples of character types and valid values:

z10 1234567890
z2 PL
z..35 Firma Handlowo-Uslugowa ABC S.A.

- Numeric type is described by „nk,l”, where k is an integer greater than zero and defines the maximum number of digits including fractal digits and l is an integer equal or greater than zero which defines the number of fractal digits. This type defines numbers. Character „.” is the separator of fractal digits; this character is not included in total number of digits.

Examples of numeric types and valid values:

n15,2 100.87; 2300; 100.8
n7,0 2300; 7777777

For a sample type n3,2 invalid value is e.g. 333.22 (valid values are 1.22, 111, 11.2)

- Date type, described by „d”. Defines date. Values of this type should be entered in the following format: rrrr-mm-dd, where: rrrr is year, mm month, dd day. Character „-” (dash) is the separator. Number of month and day must be preceded by zero.

Examples of date type and valid value:

2003-03-30

- Date and time type, described by „dt”. Defines date and time. Values of this type are in compliance with date type rules followed by the character „T” and time value in the following format: gg:mm:ss, where gg stands for hour, mm minute, ss second. Character „:” (colon) is the separator used in time definition. Hours, minutes and seconds must be preceded by zeros. Hours are defined in 24 – hours system.

Examples of date and time type and valid value:

2003-03-30T16:01:55

- Boolean type, described by „b”. Defines two possible values „1” - yes and „0” - no.

1.11. Structure of the XML document

XML document compliant with this specification should consist of:

- XML declaration that defines version of XML standard (attribute version) and codepage (attribute encoding). The supported version of XML standard is 1.0. Example:

```
<?xml version="1.0" encoding="UTF-8"?>
```

- Body of the document, created according to the definition of elements and attributes of this specification.

An example of an XML document conforming to the specification:

```
<?xml version="1.0" encoding="UTF-8"?>

</DS115>
```

1.12. Allowed character set

Allowed character set for attributes and elements is defined by the codepage included in the declaration part of an XML document, i.e.:

```
<?xml version="1.0" encoding="code_page"?>
```

e.g.:

```
<?xml version="1.0" encoding="UTF-8"?>
```

Allowed codepages to be used by traders are: UTF-8, UTF-16, ISO-8859-2, windows-1250. Documents sent to traders use codepage UTF-8. Dokumenty wysyłane z Systemu s zapisywane w stronie kodowej UTF-8.

Some characters are however prohibited by the XML standard regardless of the codepage. These characters, when there is a need to use them, must be replaced by the following strings:

- znak "&" must be replaced with "&";
- quotation mark " " must be replaced with """;
- apostrophe ' ' must be replaced with "'";
- lower than "<" must be replaced with "<";
- greater than ">" must be replaced with ">";

For example string:

Firma Handlowo-Usługowa "ABC" Kowalski & Synowie S.C.

must be replaced with:

Firma Handlowo-Usługowa "ABC" Kowalski & Synowie S.C.

1.13. Pointing to elements and attributes

To clearly point to an XML element the names of the parent elements separated by „/” are used. Expression begins with „/” and the required element is placed at the end.

For example to point to the element „ElementChild1” in element „ElementChild”, which is located in „MainElement” element, the following expression must be used:

```
/MainElement/ElementChild/ElementChild1.
```

To clearly point to an attribute the same expressions are used as for the elements but they

are ended with „/” characters and the name of the attribute.

For example to point to the attribute „Attribute1” of „ElementChild1” element, which is located in element „ElementChild”, under element „ElementGlowny” the following expression must be used:

/MainElement/ElementChild/ElementChild1/@Attribute1.

1.14. Role of schema files

Enclosed „xsd” files contain the definitions of all XML documents according to „XML Schema” (May 2001) standard of W3C.

XML parsers compliant with this standard and the „xsd” files enable the following validation types of the XML documents defined according to this specification:

- Structure validation,
- Data types validation,
- Rules checking (only rules with „S”index).

Schema files do not allow checking a document against other rules without „S” indicator or checking data against codelist values.

1.15. „Empty” attributes

Empty attributes, the value of which is only a quotation mark or which contain only white spaces, are not allowed.

Instead of:

```
<ElementChild1 Attribute1="3" Attribute2="" Attribute3=""/>
```

must be:

```
<ElementChild1 Attribute1="3"/>.
```

1.16. Digital signature

An electronic signature contained in XML documents must meet the following requirements:

- The electronic signature should be included in the additional element „<ds:Signature...”
- The „ds:Signature” element should be placed as the last element of the parent element.
- The document must be signed as whole – it is forbidden to sign only selected parts of the document.
- The electronic signature will be made by calling the service provided by the PKI, which is responsible for signing xml messages to the entities and verification of signatures coming from the entities.

/IET13-DSK/Towar/DokumentWymagany

Requested document.

			0..99	-	
Kod	44	z..4	034	W	-
Code defining the document.					
Uwagi	-	z..35	-	O	-
Comments on document.					
Numer	44	z..35	-	W	-
Identifier of a document providing additional information/Additional Document Reference Number.					

/IET13-DSK/Kontener

Marks (letters and/or numbers) which identify the transport container.

			0..99	-	
NumerKontenera	31	z..17	-	W	-
Container number.					

/IET13-DSK/DokumentPoprzedni

Reference for the temporary storage or the previous customs procedure or corresponding customs documents.

			0..9999	-	
Kategoria	40	z1	80	W	-
The component consists of different letters and is used to distinguish between categories.					
Kod	40	z..3	081	W	-
The component serves to identify the type of document.					
Numer	40	z..35	-	W	-
The component represents the data needed to recognise the document, either its identification number or another reference.					

/IET13-DSK/DokumentPoprzedni/PozycjaDokumentu

			0..999	-	
NrPozycji	40	n3,0	-	W	-
The identifier of the goods item in the previous document.					

/IET13-DSK/SkladCelny

Customs warehouse.

			0..1	-	
KrajWydaniaPozwolenia	49	z2	007	W	-
Code of the Member State issuing permission.					
NrIdentyfikacyjny	49	z..35	084	W	-
Identification number assigned by the Member State at issuing the authorization.					
TypSkładuCelnego	49	z1	085	W	-
Customs warehouse type code.					

/IET13-DSK/PodmiotWLancuchuDostaw

Additional supply chain actor(s) identification number.

			0..999	R1032	
Identyfikator	-	z..17	-	W	-
Identifier					
Rola	-	z..3	-	W	-

62.2. Contents

/ZC261

Main element. Contains all other elements.

		1	-		
xmlns	-	n..255	-	W	-
Namespace declaration - shall take the form: xmlns="http://www.mf.gov.pl/xsd/AISImport/ZC261.xsd"					
NrSystemowyAIS	-	z..40	-	W	-
System number of notification ZC261 assigned by AIS system.					
DataUtworzenia	-	dt	-	W	-
Date and time of generation the message.					

/ZC261/PowiadomienieOKontroli

Element contains information on the document subject to customs control.

		0..1	-		
MRN	-	z..18	-	W	-
Message id (assigned by AIS) of control notification.					
UCPrzedstawieniaTowaru	-	z8	001	O	-
Code of the Customs Office where the goods shall be presented.					

UCZgloszenia - z8 001 W -
Code of customs office supported the application.

Uwagi - z..255 - O -
Comments on planned customs control, including control location.

CzasKontroli - dt - O -
Planned date and time of the customs control.

/ZC261/KorektaZgloszenia

Element contains information on the document subject to customs control.

0..1 -

MRN - z..18 - W -
Message id (assigned by AIS) of correction request.

UCZgloszenia 29 z8 001 W -
Code of customs office where the notification is directed.

/ZC261/KorektaZgloszenia/Korekta

Element grouping information about changes entered within a single correction session.

1..9999 -

Data - dt - W -
Date and time of entering a change.

Uzasadnienie - z..40 - W -
Grounds.

/ZC261/KorektaZgloszenia/Korekta/Zmiana

Information about changes.

0..9999 -

WartoscPoKorekcie - z..1024 - W -
Value after transaction.

WartoscPrzedKorekta - z..1024 - W -
Value before transaction.

XQLPath - z..255 - W -
Path pointing at the element being modified.

/ZC261/DokumentWymagany

Required document.

			1..99	-
